

Preservia

| Bio-Degradable Tableware |

The Tool

Our products are made with four ingredients – Areca leaves, heat, pressure, and lots of love!

Preservia products use Areca Palm leaves that fall naturally in the vast Indian forests.

The leaves are collected by local people and water washed. Then the leaves are carefully shaped using special machines.

Every single product is trimmed and smoothened to perfection by our talented artisans

Why Preservia?

At Preservia we manufacture products that are 100% bio-degradable with the single aim to provide alternate solutions to single-use plastic that harms our planet.

We practice ethical business, meaning we strive to be fair from production to customer. Back at our manufacturing facility, our employees are mainly women from marginalized societies. When you buy Preservia products, you support a family from developing country.

Our prices are highly competitive to encourage more people to use bio-degradable products and avoid plastic. We believe that the change to natural products is imperative to pass smoothly to the next generation.

We hope you enjoy our products!

Highlights

Personalized branding: Possibility to have customized labeling of your choice.

Compostable: Product is directly compostable. Compost can be used as manure for future crops and plants.

Chemical-free: Since no chemicals are used in the manufacturing process, the products are 100% natural and safe for everyday use.

Microwaveable: Food is safe to be reheated in a microwave or an oven, best suited for take away food.

Customized design: If our extensive list of products is unable to suit your needs, personalized product design is possible as per your requirement.

Refrigerable: You can safely store away your food for days in a refrigerator in intact condition.

Water Impermeable: The plates and cups can hold water upto an hour without any changes to product quality.

Scratch-free: The physical toughness of the plates makes them scratch free to knife cuts.
